INTRODUCTION.

This Finding List was compiled somewhat hurriedly for official purposes. Although by no means complete, care has been taken to include in it as many references as possible to irrigation in Australia. In this direction it should prove valuable, not only locally, but also in all countries where irrigation is extensively practised.

This is the first printed finding list issued by the Public Library of New South Wales, and it is intended to continue the publication of such lists, especially on Australian subjects and conditions, as occasion may warrant.

The student in these States is severely handicapped by the absence of such bibliographical aids. It is easier to inform him of books and articles published in England and the United States than to discover the information on any subject of specially Australian interest. It is hoped, therefore, that other Australian Libraries and learned Societies will co-operate in removing this difficulty by issuing lists similar to those it is proposed to publish from this Library, including its collection of Australiana in the Mitchell Library.

W. H. IFOULD,

PRINCIPAL LIBRARIAN.
